

Advanced Completion Chemicals for Efficient and Safe Operations

Flatirons completion chemicals provide proven solutions to enhance frac performance, simplify operations, and protect critical assets when it matters most. With products designed for precision, safety, and reliability, you'll get the most out of every stage of the completion process.

Flatirons Completion Chemical Lineup

U028

U028 is our trusted sodium hydroxide based buffer engineered to optimize cross linking in frac fluid systems. By delivering precise and consistent pH adjustments, U028 ensures the stability and performance of your fluid systems while seamlessly integrating into your frac workflows. Providing the foundation for enhanced fluid behavior and operational efficiency.

- Simple, effective, and affordable
- Performs reliably in standard frac environments
- Easily integrated into existing workflows

Safe BFH

Safe BFH is a safer high pH buffer that replaces traditional caustics without compromising performance. It protects equipment by neutralizing CO₂ and H₂S, ensures reliable operation in extreme conditions with a freeze thaw stability, and supports sustainability by being 100% biodegradable.

- Effectively precipitates magnesium and suppresses calcium
- Outperforms traditional buffers in high-hardness water
- Effective in frac fluid systems and drilling muds

BHL-68 and BHL-68W-2

BHL-68 and its winterized counterpart, BHL-68W-2, are high-temperature peroxide breakers engineered to reduce fluid viscosity. Working by breaking down cross-linked fluid systems following frac stages, facilitating efficient cleanup, and restoring system integrity to minimize downtime.

- BHL-68: Optimized for high-temperature, high-pressure environments
- BHL-68W-2: A winterized formula designed for extreme cold
- Simplifies post-frac fluid handling
- Improves efficiency in demanding operational conditions

AT OUR CORE

Proven
Expertise

Focus on
Safety

Operational
Efficiency

Sustainability
in Mind

Take Your Completion Operations to the **Next Level**

Flatirons Chemicals is dedicated to delivering advanced solutions that empower operational success. Whether optimizing pH levels, enhancing safety protocols, or ensuring efficient post-stage fluid cleanup, our products are engineered to provide consistent, reliable performance with streamlined implementation.
